

# **INVENTORY MANAGEMENT SYSTEM FOR RETAILERS**

## **A PROJECT REPORT**

**Submitted by**

**TEAM ID : PNT2022TMID14771**

### **1. INTRODUCTION**

The aim of this project is to demonstrate how versatile Flask can be, how easily it integrates with MySQL, and how simple it is to create sophisticated web applications. A brief description of each technology used and how they interact with one another has been included.

#### **1.1 Project Overview**

For any online store, managing an inventory system is one of the most important activities. Managing an inventory system involves tracking sales / purchases and keeping track of stock levels. To make this process easier, we can use a software application known as an inventory management system. These systems help keep records and organize them into neat categories. They also provide us with reports that allow us to see how much product we currently have, what our sales are, where the product

comes from and what price it was sold for. Inventory management systems are generally used by businesses such as manufacturers, wholesalers and retailers who sell goods and services by storing stock in warehouses.

## 1.2 Purpose

The aim of this project is to demonstrate the flexibility and effectiveness of using Flask along with Remote MySQL in order to build an efficient and robust inventory management system. In particular, the scope of this project includes the successful delivery of a fully functional application that allows for the submission of data, insertion of new records, deletion/updating existing records, and retrieval of records based upon an assortment of filters.

## 2. LITERATURE SURVEY

### 2.1 Existing problem

Businesses are quickly realizing that inventory management is absolutely essential to running an efficient business and making money in the process. In particular, businesses today cannot afford to lose money or have cash flow issues. Having a consistent stock level means not having any issues with the availability of your products; as such, it ensures that your clients remain satisfied. Also, having high rates of inventory turnover minimizes the risk of

obsolescence. Businesses also benefit from having low amounts of working capital because they can focus on core activities rather than constantly investing in inventory. Finally, high levels of working capital mean that there is no need to spend as much money on storage costs. With a spreadsheet system, employees can enter inventory information into spreadsheets, which minimizes the likelihood of data entry errors. Furthermore, if someone changes the data, the entire spreadsheet needs to be updated. Lastly, lost customers due to poor inventory management should be avoided because without good inventory management, the business could easily suffer from customer attrition.

## 2.3 Problem Statement Definition

Retailers stock administration is the process of guaranteeing you bear merchandise that shoppers want, accompanying neither too little nor also chew available. By mananging stock, retailiers meet consumer demand outside failing of stock or bearing waste supply in practice, persuasive sell stock administration results in lower costs and a better understandi

ng of  
businesses pattern. Retail stock administration forms and forms give  
e  
retailers more facts on that to run their trades. Application  
have existed grown to help retailers path and control stocks had  
connection with  
their own products. The  
system will request retailers to construct their reports by  
providing basic facts.  
Retailers can approach their reports by record  
into the use before retailers successfully transfer data from one  
computer system to another to the use they  
can view analyses of the current stock analyses, again consumers will  
be able to have or do  
adjoin new stock by submitting essential analyses had connection  
with the stock. They  
can view analyses of the current stock. The system will as a matter  
of usual practice transmit  
an electronic  
mail alert to the retailers if skilled is no stock about their accounts.  
So  
that they can order new stock.

### Inconsistent Tracking

Using manual stock pursuing processes across various spreadsheet and spreadsheets is late, excessive and weak to mistakes.  
>Even limited trades can benefit from a concentrated stock following method that contains bookkeeping.  
resolution: Centralized Tracking deal with improving to pursuing spreadsheet that determines electrical lineaments for re-commanding and obtainment.  
Inventory administration podiums determine concentrated, cloud-located databases for correct, mechanical stock refurbishes and palpable-opportunityS

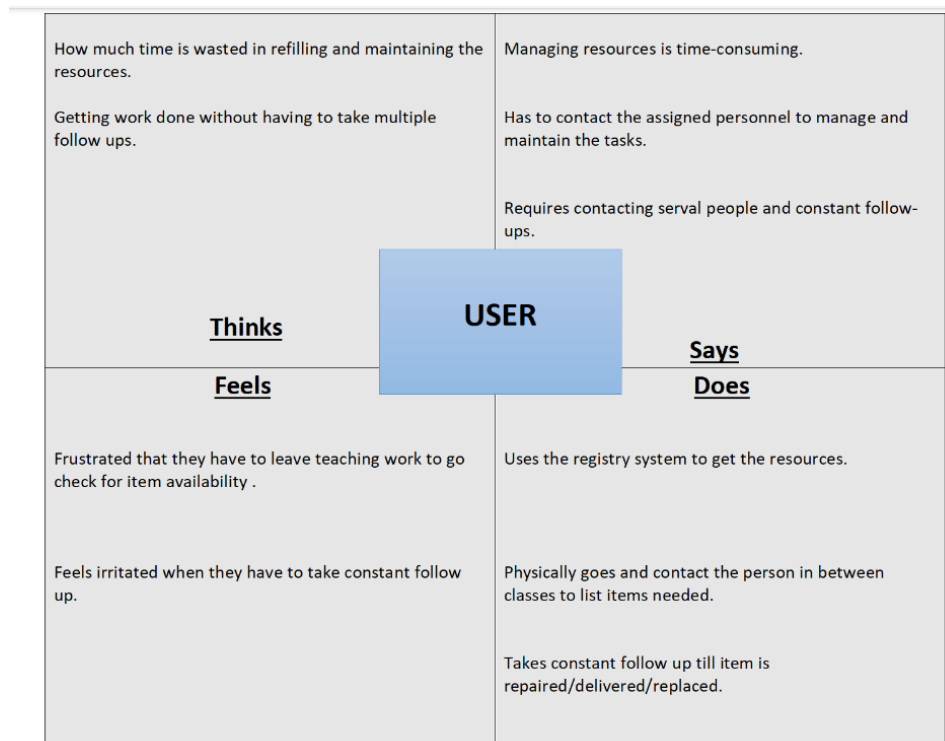

## SUPPLY DEMAND

Customer demand is uniformly shifting. Keeping too much keep result in obsolete stock you are unable to advertise, while keeping too little manage leave you unable to fulfil customer orders.  
⇒ Order plans for core items in addition to technology to create and kill an inventory plan, can help fix changing demand.  
Solution: Demand forecasting few inventory management terraces include demand forecasting forms. This feature integrates with accounting and reductions data to help you anticipate demand and schedule orders based

on shifting consumer preferences, material availability or seasonal flows

### 3. IDEATION & PROPOSED SOLUTION

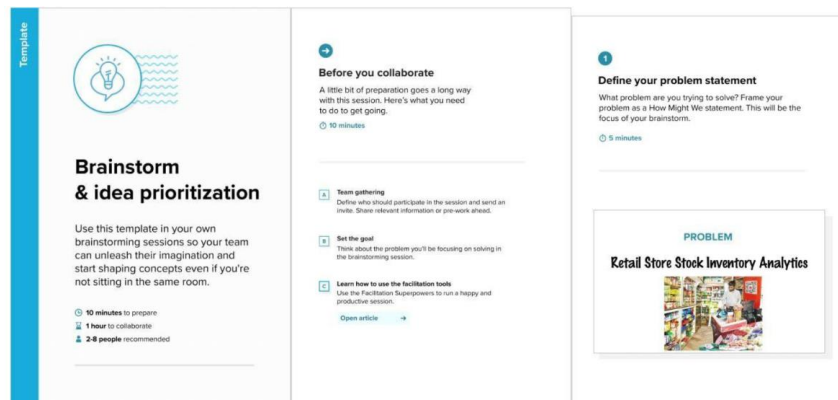

#### 3.1 Empathy Map Canvas

An understanding sketch helps to plan what a design crew experiences about the potential hearing. This finish helps to accept the reason behind few conduct a consumer takes intensely. This form helps build Empathy towards consumers and helps design groups shift focus from the amount to the consumers the one are make use

of use the amount. As the crew learns nearly the consumers, they place that news on the chart and gain an meticulous view of the consumer demeanor, questions, time.

### 3.2 Ideation & Brainstorming

the process which plans are created utilizing methods like idea plan, free writing, etc. It may be secondhand pick an issue, decrease a board argument, or to board an excessively narrow matter. Choosing a point may be a troublesome process when offset an appointment, writing a paper, or working on a spoken performance

### 3.3 Proposed Solution

#### Problem Statement (Problem expected answered)

- Stock analyses and administration is a grown task
- As there is no decent stock

Management resolutions famous to bureaucracy

#### Idea / Solution writing

- By providing a plank to uphold a decent report of the product analyses

◦ Both the retailers and the clients can path the order surely at this moment use.

- The request admits the consumers to see all the present period possible stocks and likewise when the new stock will be accessible on the store for ruling class to buy.

- The system will inform or alert the dealer over the end date of the commodity.

#### Novelty / Uniqueness

- Notifications will be shipped to the retailers if any crop that the clients have happened expect is not accessible for fear that the brand maybe hoarded up soon.

◦ Exclusive discounts and offers are likely for normal clients to mai

maintain ruling class busy accompanying the store frequently.

- Certain machine intelligence algorithms are used to foresee the seasonal extreme trading output that maybe fashionable all along period.

#### Social Impact / Customer Satisfaction

- The clients will be highly compensated because the ruining momentary while probing for a nonexistent production is lowered
- The work load of the retailers will be underrated if the system is mechanical continually and all along all purchase.
- The consumer delight will be revised for capturing appropriate answer from the retailers directly.

#### Business Model (Revenue Model)

Through this solution we can increase consumer vindication that leads to more profit in addition to decent stock support will decrease the money cost as well as the disappearance of the device will be prevented. Through this we are going to stock only the required output.

## Scalability of the Solution

- This resolution is doable cause we have enough electronics to implement this solution.

We have cloud estimating for detached achieve and miscellaneous communication order to inform.

### 3.4 Problem Solution fit

ProjectTitle: Inventory Management System for Retailers      Project Design Phase-4 – Solution Fit Template      TeamID:PNT2022TMD14771

<b>1. CUSTOMER SEGMENT(S)</b> Who are your customers? or writing personas of 3-5 key roles  Customer who wants to buy inventory	<b>4. CUSTOMER CONSTRAINTS</b> What constraints prevent your customers from taking action or limit their choices? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Time constraints</li><li>• Lack of money</li><li>• Emergency need of inventory</li></ul>	<b>5. AVAILABLE SOLUTIONS</b> Which solutions are available to the customers when they face the problem? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Retailer to maintain safety stock on hand.</li><li>• Have in track the buying and sales on inventory.</li><li>• Make customer hold on to their shop by providing quality products.</li></ul>
<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> What jobs do customers are performing or do you address for your customers? There could be more than one unique different value.  <ul style="list-style-type: none"><li>• Too much customer and lack of inventory.</li><li>• Use accurate dataset for visualization.</li><li>• Get customer review.</li></ul>	<b>9. PROBLEM ROOT CAUSE</b> What is the root cause that the problem exist? What is the root cause that the problem exist? <ul style="list-style-type: none"><li>• The problem is faced by customer if the retailer mis to keep the stock on hand that are needed for them.</li><li>• The retailer face issue as the sales is not the same all time.</li><li>• If retailer makes too inventory it leads to excess capital cost.</li></ul>	<b>7. BEHAVIOUR</b> What job your customer do to address the problem and get the job done? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Have direct contact with customer requirements.</li><li>• Regular feedback from customer.</li><li>• Convince if out of stock.</li><li>• Make inventory to get available at earliest time possible.</li></ul>
<b>3. TRIGGERS</b> What triggers customers to get in using their shop or inventory data? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Review from neighbors about the product.</li><li>• Disappointment if out of stock.</li></ul>	<b>10. YOUR SOLUTION</b> If you were building an AI/ML solution, what data your customer would be used to? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• The proposed solution is to visualize the sales data or using different visualization charts and to make an interactive dashboard to give insights on how much inventory should be maintained for making happy customers and not make loss of money due to excess inventory.</li><li>• Different category of data are been visualized using appropriate charts.</li></ul>	<b>8. CHANNELS-OF-BEHAVIOUR</b> How do you want to communicate with customer? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Online: Online buying of inventory is simple and feasible</li><li>• Use interactive website available.</li><li>• Offline: Direct review to retailer.</li><li>• Check quality of product before buying.</li></ul>
<b>6. EMOTIONS BEFORE / AFTER</b> How do customers feel about their shop or inventory data? or writing personas of 3-5 key roles <ul style="list-style-type: none"><li>• Before - Disappointed when out of stock</li><li>• One hope &amp; interest on shop.</li><li>• After - Happy with retailer stock maintenance Satisfied.</li></ul>		

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional requirement

Functional Requirement (Epic) No.	Sub Requirement (Story / Sub-Task)
F R-1	User Registration Registration through Form Registration through Gmail Registration through LinkedIn
F	User Confirmation Confirmation via Email

R-2		Confirmation via OTP
F	Transactions	Transaction processing systems
R-3	processing	provide an execution environment that ensures the integrity, availability, and security of data.
F	Authorization	Authority levels provide a method
R-4	levels	of grouping privileges and higher level operations for maintaining database managers and utility operations.
F	External interfaces	The External Interface enables
R-5		client applications to start and converse with applications that are running. It is therefore a method of enhancing an existing application by adding a graphical or other modern interface.

#### 4.2 Non-Functional requirements

##### **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

<b>F</b>	<b>Non-Functional</b>	<b>Description</b>
<b>R</b>	<b>Requirement</b>	
<b>No.</b>		
N	<b>Usability</b>	Usability defines how difficult it
FR-1		will be for a user to learn and operate the system. Usability can be accessed from different points of

view.

N  
FR-2      **Security**

Security requirements ensure that the software is protected from unauthorized access to the system and its stored data.

N  
FR-3      **Reliability**

Reliability defines how likely it is for the software to work without failure for a given period .It decreases because of bugs in the code, hardware failures, or problems with other system components.

N  
FR-4      **Performance**

Performance is a quality attribute that describes the responsiveness of the system to various user interactions with it. Poor performance leads to negative user experience. It also jeopardizes system safety when overloaded.

N  
FR-5      **Availability**

Availability is gauged by the period that the system's functionality and services are available for use with all operations.

N  
FR-6      **Scalability**

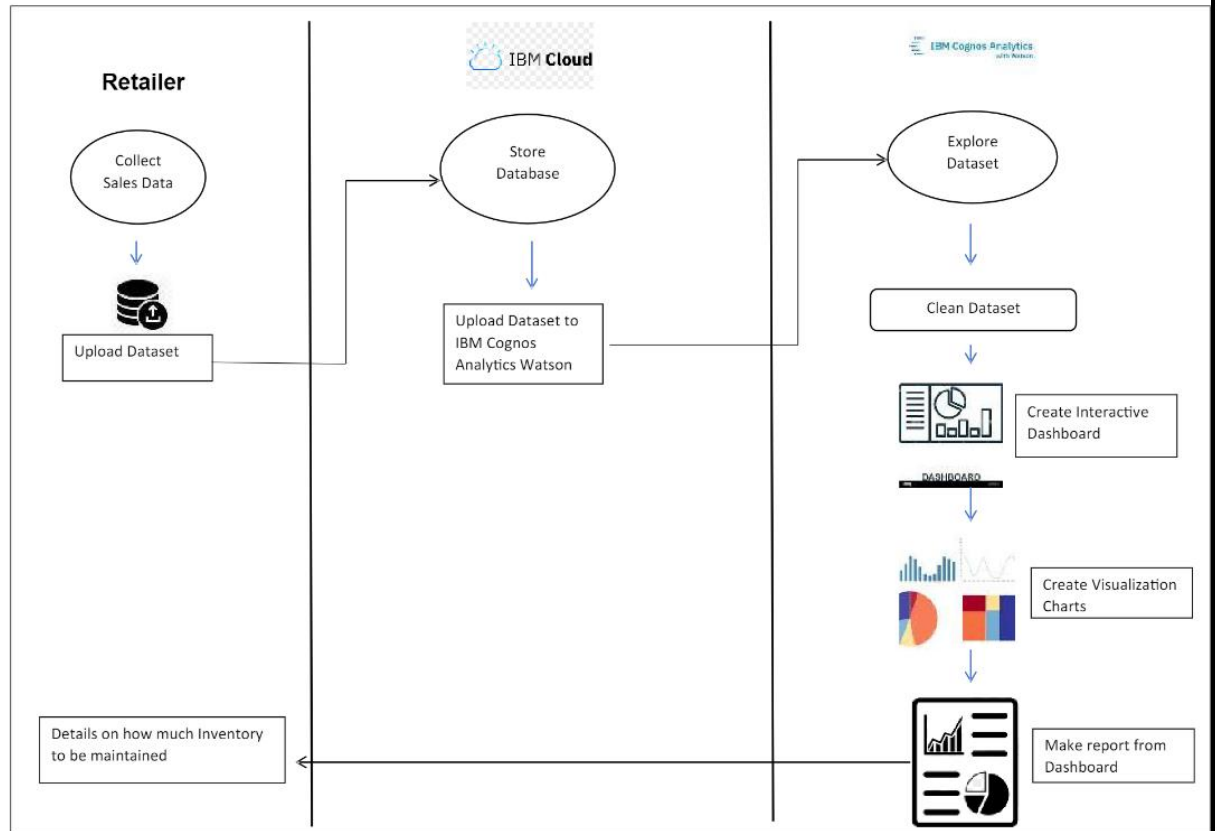

Scalability requirements describe how the system must grow without negative influence on its performance. This means serving more users, processing more data, and doing more transactions.

## 5. PROJECT DESIGN

### 5.1 Data Flow Diagrams

## 5.2 Solution & Technical Architecture

**Table-1 : Components & Technologies:**

S.No	Component	Description	Technology
1.	User Interface	The user interacts with application using web UI	HTML, CSS, JavaScript
2.	Dataset Collection	The sales data is been collected	Retail Store
3.	Data Processing	The data from dataset is pre-processed	IBM Cognos Analytics with Watson
4.	Cloud Database	The dataset is uploaded in IBM cloud	IBM Cloud
5.	Data Visualization	The data is visualized with various charts	IBM Cognos Analytics with Watson, Python
6.	Prediction	The algorithm helps to predict the proper way to make inventory available	Logistic Regression, Linear Regression, Random Forest, ABC Technique
7.	Report	A detailed report is made from the dashboard	IBM Cognos Analytics with Watson

**Table-2: Application Characteristics:**

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	IBM Cognos Analytics with Watson is used	IBM Cognos Analytics with Watson, Python ,Jupyter Notebook.
2.	Security Implementations	Authentication is undergone	Encryptions
3.	Scalable Architecture	This is a 3-tier application	Application server – Python Database Server – IBM Cloud
4.	Availability	The application is available for IBM Cloud users	IBM Cloud Hosting
5.	Performance	This makes retailer to maintain the inventory to make happy customers.	ML Algorithms

## 5.3 User Stories

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail	I can register for the application through Gmail	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can log into the application by entering email & password	High	Sprint-1
	Request	USN-6	Request an item	Happy to find ease to use	High	Sprint-2
	Search	USN-7	Search an item	Easy to find an item	High	Sprint-3
	Orders	USN-8	As an user can place the order	User can receive a confirmation message	High	Sprint-3
	Payments	USN-9	Make a payment for purchasing	I can pay and get confirmation bill	High	Sprint-4
	Monitoring	USN-10	Monitoring quantity of the items	I can update how much of item needed	High	Sprint-4
	Feedback	USN-11	Users can share their experience about the items	users friendly customer support	High	Sprint-5

## 6. PROJECT PLANNING & SCHEDULING

### 6.1 Sprint Planning & Estimation

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	User Panel	USN-1	The user will login into the website and go through the services available on the webpage	20	High	Devadharshini Harish Krishna.S Lakshya jain Hisham
Sprint-2	Admin panel	USN-2	The role of the admin is to check out the database about the availability and have a track of all the things that the users are going to service	20	High	Devadharshini Harish

						Krishna.S Lakshya jain Hisham
Sprint-3	Chat Bot	USN-3	The user can directly talk to Chatbot regarding the services. Get the recommendations based on information provided by the user.	20	High	Lakshya jain Hisham

## 6.2 Sprint Delivery Schedule

**Project Tracker, Velocity &  
Burndown Chart:**

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date ( Actual )
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	5	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	4	05 Nov 2022

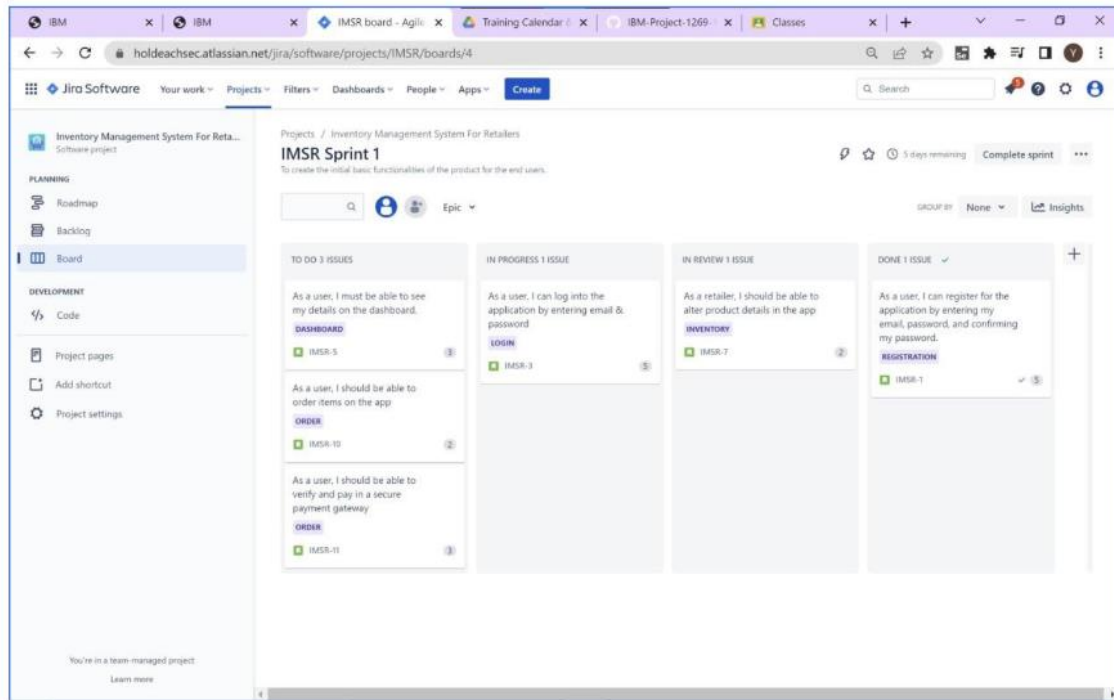

---

---

Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	5	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	7	19 Nov 2022

## 6.3 Reports from JIRA

### 1. Create a new JIRA Board using SCRUM Template.

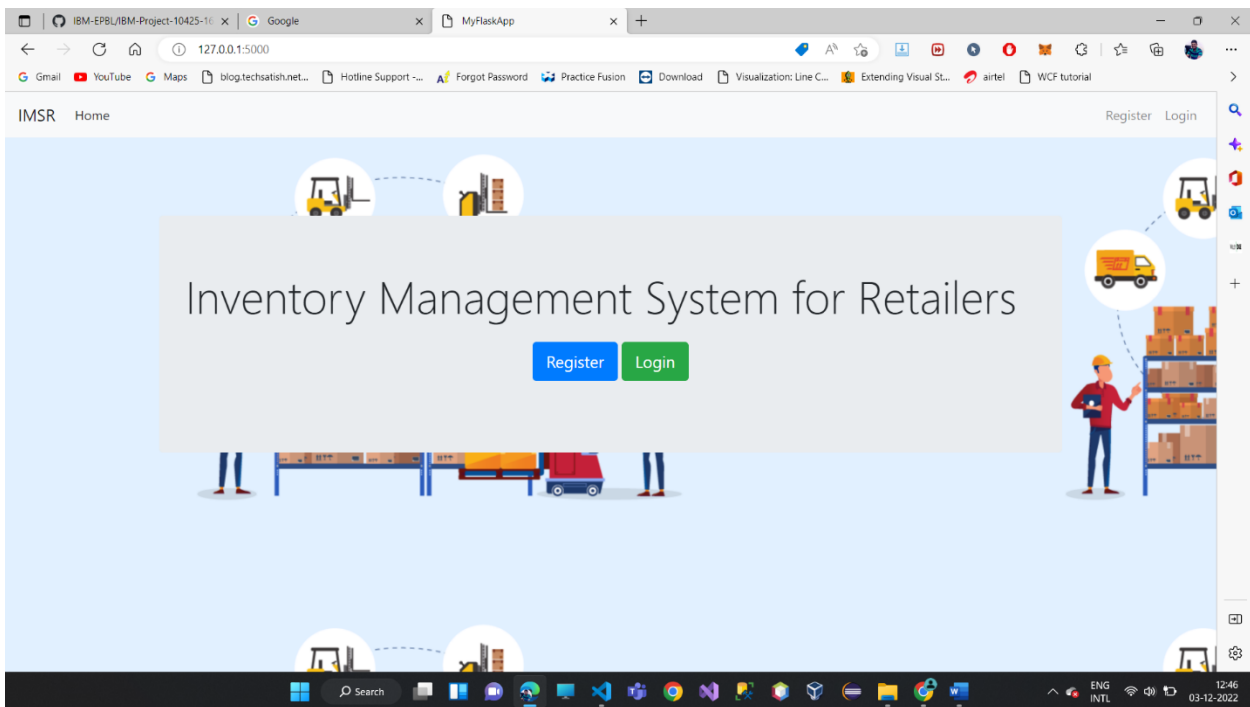

## **7. CODING & SOLUTIONING (Explain the features added in the project along with code)**

### **7.1 Feature 1**

Once retailers favorably transfer data from one computer system to another to the request they can renew their stock analyses, more consumers will within financial means adjoin new stock by presenting basic facts had connection with the stock. They can view analyses of the current stock. The System will inevitably transmit an electronic mail alert to the retailers if skilled is no stock about their reports. So that they can order new stock.

## 7.2 Feature 2

**The next big thing to be added is user and manager login and sign up pages**

**which includes sub features in our source code – reorder level , restock, auto-updation of temp values -null and missing values in the price section**

## 8. TESTING

### 8.1 Test Cases

	y1	y2	y3	y4	al
By Design	10	4	2	3	20
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won'tFix	0	5	2	1	8
Totals	24	14	13	26	7
					7

### ***TestCaseAnalysis***

This report shows the number of testcases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Passes
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Out source Shipping	3	0	0	3
Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

## 9. RESULTS

### 9.1 Performance Metrics

Software characteristic is a calculation of entity obscured, “by what method good” a spreadsheet device genuinely is. Some of the facets of operating system characteristic captured are

- a. Scalability
- b. Speed

c. Stability

d. Reliability

e. Security

f. Maintainability and rule characteristic

Test Case ID	Action	Steps	Input Data	Expected Results	Actual Results	Status
TC-1	Invoice No.	Enter Invoice No.	Input "10121"	It should accepted Invoice no.	Invoice no. is accepting	Pass
TC-2	Bill Date	Enter Bill date	Input "17/10/2021"	It should accepted Bill date	Bill date is accepting	Pass
TC-3	Supplier	Select Supplier		Supplier name	Supplier name is	Pass
TC-4	Item name(options)	Select Item name		Item name should be automatically reflected	Item name is reflecting automatically	Pass
TC-5	Available item stock	Click on Textbox	-	It should reflect automatically item stock.	Item stock is reflecting automatically	Pass

TC-6	Quantity	Enter item quantity	Input "5"	Item quantity should be accepted	Item quantity is accepting	Pass
TC-7	Price(unit)	Click on Textbox	-	Price should be reflected automatically	Price is reflecting automatically	Pass
TC-8	Total(unit)	Click on Textbox	-	Total should be reflected automatically	Total is reflecting automatically	Pass
TC-9	Receive Bill date	Enter Receive Bill date	Input "17/10/2021"	Receive Bill date should be accepted	Receive Bill date is accepting	Pass
TC-10	Add item	Click on add item	-	It should be add item reflected in database	Add item is reflecting in database	Pass

## 10. **ADVANTAGES**

- Cost efficient
- Customer service is increased by a large way
- Increases a the planning for the business to expand
- The amount of time saved in the process is huge.
- Real-time stock- following helps to increase stock administration and guarantees that you have optimum s tock feasible to confirm orders.

## **DISADVANTAGES**

- Online inventory system maybe prone to hackers if not properly secured
- so security is a major concern unless done in an authorized way
- At times due to network traffic delay in payments and inventory can cause certain issues.

## 11. **CONCLUSION**

Inventory control is a completely complicated however important a part of the deliver chain. An powerful stock control

machine facilitates to lessen stock-associated fees which include warehousing, carrying, and ordering fees.

Indeed the task of Management is innovative trouble fixing. This innovative trouble fixing is achieved via 4 capabilities of management: planning, organising, main and controlling. The meant end result is the usage of an organisation`s sources in a manner that accomplishes its venture and objectives

## 12. **FUTURE SCOPE**

- **To improve the maximum outcome**

as the Inventory control allows to enhance the productiveness of the machines and manpower. Employees are aware about shares and the amount that require to produce.

- **IMPROVING THE SECURITY ASPECT OF IT**

## FLASK DEPLOYMENT

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: flask-app

spec:
  replicas: 3
  selector:
    matchLabels:
      app: flask-app
  template:
    metadata:
      labels:
        app: flask-app
```

```
spec:
  containers:
    - name: web
      image: Abinaya/flask
      imagePullPolicy: Never
      ports:
        - containerPort: 5000
          protocol: TCP
```

## IBM CLOUD DEPLOYMENT

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: flask-deploy
```

```
spec:
  replicas: 3
  selector:
    matchLabels:
      app: flask-deploy
  template:
    metadata:
```

```
labels:
  app: flask-deploy

spec:
  containers:
    - name: web
      image: jp.icr.io/website/web
      imagePullPolicy: Always
      ports:
        - containerPort: 5000
      protocol: TCP
```

FLASK FILE :

```
from flask import Flask,render_template
app=Flask(__name__)
```

```
@app.route('/home')
```

```
def home():
    return render_template('home.html')
```

```
@app.route('/signin')
```

```
def signin():
    return render_template('signin.html')
```

```
@app.route('/about')
def about():
    return render_template('about.html')

@app.route('/signup')
def signup():
    return render_template('signup.html')

if __name__ == '__main__':
    app.run()
```

DOCKER ACCESS

FROM python:3.10.4

WORKDIR /app

COPY requirements.txt ./

RUN pip install -r requirements.txt

COPY . .

EXPOSE 5000

CMD ["python","./app.py"]
